

1st United Methodist Church

City: Nixon, Texas

Dates: Feb 2017 - Present

Contract Value: \$177,265.31

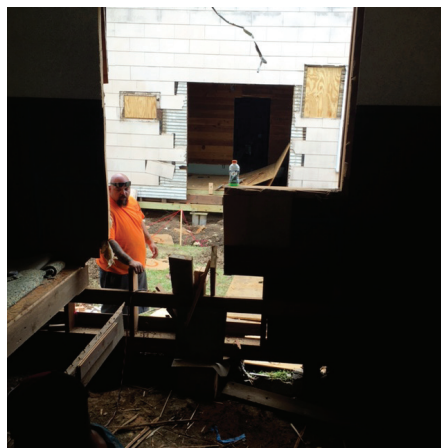

Elevation Concept Drawing

The design build project consisted of building a handicap access bridge to connect the existing Church and Annex building; renovating the interior of Annex which was built in the 40's, remodeled in the 70's and in need of complete interior update. The building needed to have ductwork and central air conditioning, insulation in the walls and ceilings, new Men and Womens ADA bathrooms, new electrical wiring throughout the building, demolition and restoration of the interior of the Annex Building. R3group tx is working hand in hand with the Board to restore the property back to its original state.
